AI-ASSISTED AML INVESTIGATION

The AML Investigation Platform at a Glance

An AI-powered AML investigation platform that prepares the case before your investigator opens it.

FROM ALERT TO DECISION

Alert Signal raised › **Context** Case prepared › **Decision** Human-led

Start with evidence and a clear next step - not a blank screen.

A monitoring system raises the alert. Someone still has to work out why it fired, pull the evidence together, apply policy and decide what happens next. The TechnoXander **AML investigation platform** takes on that preparation work, so your team starts with a structured case rather than a blank screen. AI recommends the next step. An authorised financial crime professional makes the call.

01 / PRODUCT

What the platform does

Four parts. One reviewable workflow.

01 Builds the case first

Pulls transactions, KYC/CDD data, screening results and earlier cases into one view, each item traceable to its source.

02 Applies your rules

Reads the evidence against your own AML policy, FCA and JMLSG guidance and recent enforcement themes.

03 Recommends, never decides

Suggests close, escalate or challenge. Your MLRO or investigator keeps the final decision, and every action is logged.

04 Fits what you already run

Works alongside your existing transaction monitoring and alerting. It focuses on investigating and resolving alerts, not replacing detection.

KEEP THE HUMAN IN THE LOOP

Faster investigation does not mean automated judgement. Every recommendation is explainable and every decision stays with a person.

THE PLATFORM STANDARD

Show the evidence, show the reasoning, and leave the next reviewer able to follow the decision.

TRUST AND DELIVERY

ISO 27001:2022 certified | Crown Commercial Service supplier | EPC-approved PVRM | Pay.UK approved provider | 50+ financial institutions served since 2017
